

# White Stone feedback 14 Feb 7pm

## Today view

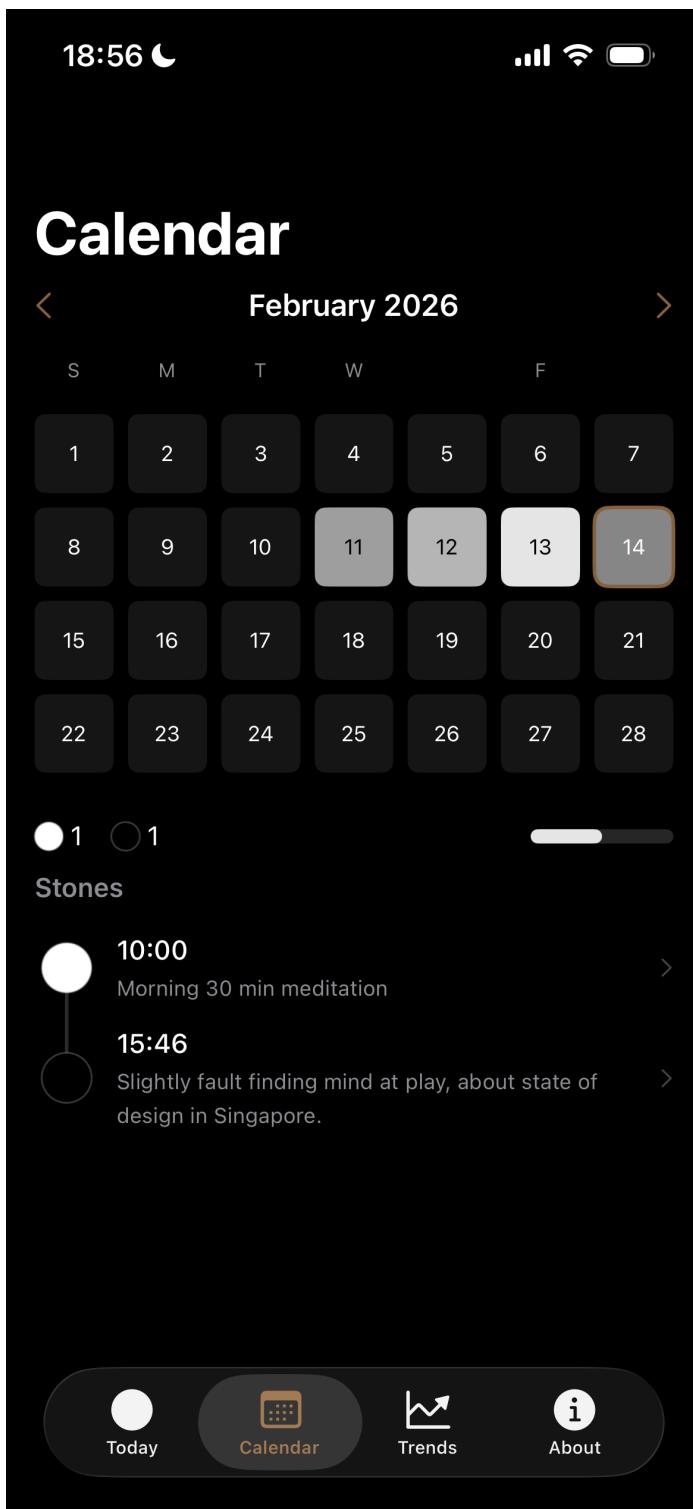

- make the Stone more textured & realistic, slightly more 3D. Right now it looks very flat.
- Change the text from 'this is your day ratio so far' to "Your ratio today of good thoughts to bad thoughts "
- add a pulsing haptic when one long-presses on the stone. Pulse frequency of about 8 Hz.
- add an animation with a long-press: of the stone pulsing at 8 Hz.

- after the long press finishes, it should lead to the Modal.

### Trends View

- The opacity still causes the above: it looks odd. Can the StoneView be fully transparent until just before the animation ends, so that we don't get this problem?

### Calendar view

- Days of the week are missing from the calendar
- Start the week on Monday, not Sundays.
