# WhiteStone 12 Feb 26 use feedback notes

The date didn't update until i closed the app and restarted the app.
Desired behaviour- app should auto update the date based on system date and time.

Stone detail view
– lacking edit button to edit the Notes.

Trends view
  – can't see the days of the week. Should be "M" for Monday, T for Tuesday, Th for Thursday etc.
  – put date below each day of the week eg 11
  – when the chart bar is clicked, the StonesView for the day should appear below the chart (and the screen should be scrollable down). And when the bar is clicked again, then the StonesView should disappear.
